

“BioWorks, Inc., Fairport, NY provides environmentally responsible, safe and cost-effective solutions to the agriculture industry.”

The company was co-founded by Harman in 1993 for the purpose of manufacturing and selling biological control products based on patented *Trichoderma* strains from Harman’s laboratory for the control of plant diseases and plant growth promotion. It is a spin-off company from Cornell University and has offices its manufacturing facility in Geneva, NY.

Harman had a number of management roles including a vice presidency, and for about 8 months, as the acting CEO of the company during a critical time.

The company’s CEO now is William Foster. It manufactures and sells products based on two *Trichoderma* strains to the greenhouse and nursery industries; an affiliated company, Advanced Biological Marketing sells BioWorks’ products to the ag rowcrop market. BioWorks’ products are sold in the US, Canada, Europe, Turkey and some countries in Asia. Results in the greenhouse market with its RootShield™ product is shown below. It also sells other environmentally friendly products to the greenhouse market.

**Untreated    1 fungicide app.    Multiple fungicide applications    1 RootShield app.**

Links to BioWorks web page and to some of the companies that sell its products follow. THE BIOWORKS SITE INCLUDES MSDS SHEETS, PRODUCT LABELS AND USE DIRECTIONS.
